Special Something

Your wrist, measured.

A printable helper for bracelet planning.
This measures your wrist, not your bracelet size.

1. Print and check the scale

Print on A4 paper at 100% or Actual size.
Turn off Fit, Shrink and Scale to fit.
Measure this line with a physical ruler.
It must be exactly 100 mm (10 cm).

100 mm

If the line is not 100 mm, adjust the print settings.
Do not use an incorrectly scaled strip.

2. Cut out the strip

Cut carefully along the dotted border.
Keep the zero line and the full measuring scale.
Use ordinary paper; do not stretch it.

3. Measure where the bracelet will sit

Wrap the strip flat around your wrist without pulling it tight. Align the zero line with the scale where the strip overlaps. Read that measurement. Repeat once to check. Ask for help if needed. This strip reads up to 24 cm. For a larger wrist, use a flexible tape measure instead.

4. Check the exact bracelet guide

A wrist measurement is not a purchase size. Clasp design, rigid bangles, charm load and the maker's sizing method can change the fit. Do not add a universal allowance. Use the size guide for the particular bracelet you are buying.

My wrist measurement: _____ **cm**
